

CyberGuard Executive Security Report

Generated from live CyberGuard SQLite SOC data. This report summarises security posture, incident activity, analyst documentation, and audit readiness.

Security Posture Score	Current Posture	Report Status
66/100	Moderate Risk	Enabled

Key SOC Metrics

Metric	Value	Meaning
Total Incidents	4	All recorded SOC cases
Critical Incidents	3	Highest-priority cases
High Incidents	1	High-severity cases requiring review
Open Incidents	1	Cases still requiring action
Resolved Incidents	1	Cases completed
Contained Incidents	2	Cases controlled but not fully closed
Analyst Notes	5	Investigation documentation entries
Audit Events	8	Tracked workflow/accountability actions

Executive Summary

CyberGuard currently reports 4 total incident(s), including 3 critical incident(s), 1 high-severity incident(s), and 1 open incident(s). The current security posture is Moderate Risk with a score of 66/100. The system has recorded 8 audit event(s) and 5 analyst note(s), supporting traceability, incident accountability, and executive-level reporting.

Top Security Risks

- 3 critical incident(s) require priority SOC review.
- 1 high-severity incident(s) may require escalation.
- 1 open incident(s) remain unresolved.
- Critical incident: Simulated SSH Brute Force Attack from source IP 203.0.113.45.

- Critical incident: Simulated SSH Brute Force Attack from source IP 203.0.113.45.
- High incident: Malware C2 Traffic Review from source IP 198.51.100.22.

Recommended Actions

- Prioritise Critical and High incidents for analyst review.
- Ensure analyst notes are added for every active investigation.
- Review audit logs for accountability and workflow traceability.
- Move contained or resolved incidents through closure procedures.

SOC Maturity Indicators

Area	Status
Threat Detection	Active
Incident Response	Active
Audit Readiness	Enabled
Executive Reporting	Enabled

Report Interpretation

This report is generated from the operational CyberGuard SaaS database. Incident, note, audit, MITRE, and dashboard data are intended to support SOC decision-making, accountability, and executive communication. The report should be reviewed alongside analyst evidence and incident case notes before final business action is taken.
